This guide provides basic information for Unitronics’ controllers V570-57-C30B and V570-57-T40B.

**General Description**

Vision OPLCs are programmable logic controllers that comprise an integral operating panel. V570-57-C30B and V570-57-T40B comprise a color touchscreen, which displays a virtual keyboard when the application requires the operator to enter data.

**Communications**
- 2 isolated RS232/RS485 ports
- Isolated CANbus port, CANopen & UniCAN
- The user can order and install an Ethernet port
- Communication Function Blocks include: SMS, GPRS, MODBUS serial/IP Protocol FB enables PLC to communicate with almost any external device, via serial or Ethernet communications

**I/O Options**
Vision supports up to 512 digital, high-speed, and analog I/Os via:
- Snap-in I/O Modules
  Plug into the back of the controller to provide an on-board I/O configuration
- I/O Expansion Modules
  Via adaptor, local or remote I/Os may be added via expansion port or CANbus

Installation instructions and other data may be found in the module’s technical specification sheet.

**Information Mode**
This mode enables you to:
- Calibrate the touchscreen
- View & Edit operand values, COM port settings, RTC and screen contrast/brightness settings
- Stop, initialize, and reset the PLC

To enter Information Mode, press the touchscreen and maintain contact for several seconds.

**Programming Software, & Utilities**
The Unitronics Setup CD contains VisiLogic software and other utilities
- **VisiLogic**
  Easily configure hardware and write both HMI and Ladder control applications; the Function Block library simplifies complex tasks such as PID. Write your application, and then download it to the controller via the programming cable included in the kit.
- **Utilities**
  These include UniOPC server, Remote Access for remote programming and diagnostics, and DataXport for run-time data logging.

To learn how to use and program the controller, as well as use utilities such as Remote Access, refer to the VisiLogic Help system.

1 Number of I/Os may vary according to I/O module selection.
Removable Memory Storage
An SD card enables you to store datalogs, Alarm history, Data Tables; export to Excel/.csv, backup Ladder, HMI & OS and use this data to ‘clone’ PLCs.
For more data, refer to the SD topics in the VisiLogic Help system.

Operand Types
Memory Bits 8192; Memory Integers 4096 registers 16-bit, 512 Long Integers, 32-bit, 256; Double Word, 32-bit unsigned, 64; Memory Floats, 32-bit, 384; Timers, 32-bit, 32; Counters, 16-bit.

Data Tables
120K (Dynamic)/ 192K (Static) enables application recipes and data logging.

Additional product documentation is in the Technical Library, located at www.unitronics.com, and on the Unitronics’ Setup CD.
Technical support is available at the site, and from support@unitronics.com.

Standard Kit Contents
Vision controller Battery (not installed)
3 pin power supply connector Programming cable + RS232 adapter
5-pin CANbus connector Mounting brackets (x4)
CANbus network termination resistor Rubber seal
Unitronics’ Setup CD

Danger Symbols
When any of the following symbols appear, read the associated information carefully.

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>🚨</td>
<td>Danger</td>
<td>The identified danger causes physical and property damage.</td>
</tr>
<tr>
<td>⚠️</td>
<td>Warning</td>
<td>The identified danger could cause physical and property damage.</td>
</tr>
<tr>
<td>⚠️</td>
<td>Caution</td>
<td>Use caution.</td>
</tr>
</tbody>
</table>

- Before using this product, the user must read and understand this document.
- All examples and diagrams are intended to aid understanding, and do not guarantee operation. Unitronics accepts no responsibility for actual use of this product based on these examples.
- Please dispose of this product according to local and national standards and regulations.
- Only qualified service personnel should open this device or carry out repairs.

Failure to comply with appropriate safety guidelines can cause severe injury or property damage.

- Do not attempt to use this device with parameters that exceed permissible levels.
- To avoid damaging the system, do not connect/disconnect the device when power is on.

Environmental Considerations
- Do not install in areas with: excessive or conductive dust, corrosive or flammable gas, moisture or rain, excessive heat, regular impact shocks or excessive vibration, in accordance with the standards given in the product’s technical specification sheet.
- Ventilation: 10mm space required between controller’s top/bottom edges & enclosure walls.
- Do not place in water or let water leak onto the unit.
- Do not allow debris to fall inside the unit during installation.
- Install at maximum distance from high-voltage cables and power equipment.
Inserting the Battery

In order to preserve data in case of power-off, you must insert the battery.

The battery is supplied taped to the battery cover on the rear of the controller.

1. Remove the battery cover shown on page 6. The polarity (+) is marked on the battery holder and on the battery.
2. Insert the battery, ensuring that the polarity symbol on the battery is:
   - facing up
   - aligned with the symbol on the holder
3. Replace the battery cover.

Dimensions
Mounting

- Before you begin, note that the mounting panel cannot be more than 5 mm thick.

1. Make a panel cut-out according to the dimensions in the next figure.

**Cut-out Dimensions**

2. Slide the controller into the cut-out, ensuring that the rubber seal is in place.

3. Push the 4 mounting brackets into their slots on the sides of the controller as shown in the figure to the right.

4. Tighten the bracket screws against the panel. Hold the bracket securely against the unit while tightening the screw.

5. When properly mounted, the controller is squarely situated in the panel cut-out as shown below.
Wiring: General

- Do not touch live wires.
- Unused pins should not be connected. Ignoring this directive may damage the device.

Caution
- To avoid damaging the wire, do not exceed a maximum torque of 0.5 N·m (5 kgf·cm).
- Do not use tin, solder, or any substance on stripped wire that might cause the wire strand to break.

Use crimp terminals for wiring; use 26-14 AWG wire (0.13 mm²–2.08 mm²).
1. Strip the wire to a length of 7±0.5mm (0.250–0.300”).
2. Unscrew the terminal to its widest position before inserting a wire.
3. Insert the wire completely into the terminal to ensure a proper connection.
4. Tighten enough to keep the wire from pulling free.

Power Supply

The controller requires an external 24VDC power supply. The permissible input voltage range is 20.4–28.8VDC, with less than 10% ripple.

- A non-isolated power supply can be used if a 0V signal is connected to the chassis.

- You must use an external circuit protection device.
- Install an external circuit breaker. Guard against short-circuiting in external wiring.
- Double-check all wiring before turning on the power supply.
- Do not connect either the ‘Neutral or ‘Line’ signal of the 110/220VAC to device’s 0V pin.
- In the event of voltage fluctuations or non-conformity to voltage power supply specifications, connect the device to a regulated power supply.

To maximize system performance, avoid electromagnetic interference by:
- Mounting the controller on a metal panel.
- Earthing the controller’s power supply: connect one end of a 14 AWG wire to the chassis signal; connect the other end to the panel.
  Note: The wire used to earth the power supply must not exceed 10 cm in length.
  If your conditions do not permit this, do not earth the power supply.
Communication Ports

This series comprises 2 RS232/RS485 serial ports and a CANbus port.

- Turn off power before making communications connections.

Caution - Always use the appropriate port adapters.

Serial Communications

The serial ports are type RJ-11 and may be set to either RS232 or RS485 via DIP switches, in accordance with the table shown on page 6.

Use RS232 to download programs from a PC, and to communicate with serial devices and applications, such as SCADA.

Use RS485 to create a multi-drop network containing up to 32 devices.

Pinouts

The pinouts below show the signals between the adapter and port.

To connect a PC to a port that is set to RS485, remove the RS485 connector, and connect the PC to the PLC via the programming cable. Note that this is possible only if flow control signals are not used (which is the standard case).

</tr>
</tbody>
</table>

*Standard programming cables do not provide connection points for pins 1 and 6.
**When a port is adapted to RS485, Pin 1 (DTR) is used for signal A, and Pin 6 (DSR) signal is used for signal B.

RS232 to RS485: Changing DIP Switch Settings

The ports are set to RS232 by factory default.

To change the settings, first remove the Snap-in I/O Module, if one is installed, and then set the switches according to the following table.

RS232/RS485: DIP Switch Settings

The settings below are for each COM port.

<table>
<thead>
<tr>

</tbody>
</table>

*Default factory setting
**Causes the unit to function as an end unit in an RS485 network.
Removing a Snap-in I/O Module

1. Locate the four buttons on the sides of the controller, two on either side.
2. Press the buttons and hold them down to open the locking mechanism.
3. Gently rock the module from side to side, easing the module from the controller.

Re-installing a Snap-in I/O Module

1. Line the circular guidelines on the controller up with the guidelines on the Snap-in I/O Module as shown below.
2. Apply even pressure on all 4 corners until you hear a distinct ‘click’. The module is now installed. Check that all sides and corners are correctly aligned.
CANbus

These controllers comprise a CANbus port. Use this to create a decentralized control network using one of the following CAN protocols:

- CANopen: 127 controllers or external devices
- Unitronics’ proprietary UniCAN: 60 controllers, (512 data bytes per scan)

The CANbus port is galvanically isolated.

CANbus Wiring

Use twisted-pair cable. DeviceNet® thick shielded twisted pair cable is recommended.

Network terminators: These are supplied with the controller. Place terminators at each end of the CANbus network.

Resistance must be set to 1%, 121Ω, 1/4W.

Connect ground signal to the earth at only one point, near the power supply.

The network power supply need not be at the end of the network

CANbus Connector
